Title I, Part A Section 1116 Parent and Family Engagement • Build strong family-school partnerships • Engage parents meaningfully • Achieve high standards	Research clearly shows that parent involvement in their child's education has a significant impact on academic success. Research also shows that early math skills are the strongest predictor of a child's success in school and beyond. Our K-5 family engagement products support families in ways that reinforce classroom learning. Parents work one-on-one with their child exploring hands-on, standards-aligned activities and gain skills and strategies that can be used to help their child with math at home. By engaging parents on an academic level, schools can foster a strong home/school partnership that helps promote high student achievement.
Title IV Part A and B Student Support and Academic Enrichment 21st Century Centers • Provide quality educational resources and materials • Include after school learning opportunities • Increase student/parent engagement	All students deserve access to a well-rounded education. This includes experiences filled with hands-on, minds-on activities that support learning and help create an enriched environment. All of our K-5 math products are standards-aligned and designed to improve student academic achievement by getting students excited about doing math. Our after-school Family Math Night events bring the community together to explore hands-on math learning and our take-home math games help empower parents to support learning at home in a way that's fun, engaging and educationally rich.
